False Alarm on a Crisis in China

By NICHOLAS R. LARDY  AUG. 26, 2015

Washington — CHINA, many believe, is in a financial and economic meltdown causing anxiety and panic everywhere. China’s stock market dive first dragged down other emerging markets and has now spread to the United States, slicing trillions of dollars off the value of stocks traded here and in other global markets. Since China is the world’s second largest economy and has growing financial ties around the world, developments there clearly have enormous potential implications for both developed and emerging markets.
China’s Latest Currency Actions Are Market Driven

Nicholas R. Lardy (PIIE)

China’s central bank took a potentially major step toward a more market-determined exchange rate on August 11, when it announced a revision in the process for fixing the central parity exchange rate, the starting point for daily trading of the renminbi (RMB) in the onshore market.

While the reform has set off alarm bells in some quarters, it is unlikely that this move will usher in another chapter of currency manipulation to support Chinese exports and thus its economic growth. China may well be concerned about an economic slowdown accompanied by a slump in exports, but its motivation for this move is almost certainly tied to another objective: China’s aspiration to have the RMB join the four major currencies as a reserve currency.
The Decline in China’s Foreign Exchange Reserves

April 11th, 2016 Spring Global Economics Prospects

Takeaways

• Services and consumption are likely to remain the major drivers of China’s economic growth.

• The assertion that authorities will engineer a large step devaluation of the currency to prevent a further economic slowdown is not well founded.

• The view that the decline in China’s foreign exchange reserves is because panicked mainlanders are desperately seeking ways to get money out of the country is misinformed. Rather, the decline largely reflects the unwinding of the renminbi carry trade and Chinese companies paying off dollar debt, both of which are self-limiting. Thus the market is unlikely to force a large currency depreciation.

National Financial Work Conference: Xi’s Remarks

• Guarding against *systemic financial risks* is the eternal theme of financial work and the government should take stronger initiative to monitor, warn against and deal with risks in a timely manner.

• China will accelerate developing laws and regulations *governing the financial sector*, improve macro prudential management and emphasize functional as well as behavioral regulation.

• the government will continue to *deleverage the economy* by firmly taking a prudent monetary policy and prioritizing reducing leverage in state-owned enterprises.

• China will control local government debt growth, crack down upon financial irregularities and improve supervision on Internet finance.
National Financial Work Conference: Setup of a New Committee

• The State Council Financial Stability and Development Committee

• Responsible for the coordination of the country’s financial reform, development and regulation

• Target weak links in supervision and guard against systemic risks to ensure the sound development of China’s financial system and help it better serve the real economy

Takeaways

• The rapid growth of corporate debt poses risks
• This risk has been acknowledged by China’s top leader and regulators have responded vigorously
• Interbank lending, particularly to non-bank financial institutions, is shrinking
• Share of RMB lending to less leveraged households is rising, to more leveraged corporates is falling
• Major risks in the insurance sector are being addressed
• Profitability of SOEs, the most highly leveraged of corporate borrowers, is recovering
• Key question remains—if growth slows from here will ultra-rapid credit growth resume?
